

AFTER YOUR CLEANING

There is not much left to do other than enjoy your freshly cleaned home. But here are a few tips to get you there, as well as ways to prolong that **HYDROPRO GLOW**.

PRECAUTIONS

If You Had A Housewash or Roof Cleaning Conducted, Please Wait 8 Hours Before Turning Outside Lights & Fans Back ON.

This will ensure that they have had time to dry from any residual moisture and prevent issues.

Plants & Landscaping

Plants & Landscaping were watered thoroughly before, during & after cleaning. You may notice some yellowing near downspouts or drip lines but it will return quickly. While not necessary continued watering will help them return faster. If you have any questions or issues please let us know.

Outlets & Devices

If a Housewash was conducted we taped off any outlets and/or covered any electrical items that could not be moved. As part of the process any items plugged into the outlet may have been temporarily unplugged to allow safe cleaning. Automated irrigation or similar systems may have lost their programming while unplugged.

Continued Cleaning through Nature

We rinse as thoroughly as needed to remove the growth & grime. You may notice some suds during heavy rains. This is the solution reactivating and continuing to clean. For Roof Washes especially we provide a rinse unlike our competitors however any hazing that remains will be washed away over a few rain cycles and become cleaner each time. We will also pass by approx. 2 weeks after your cleaning to verify there are no areas that need retreatment. If your roof had severe Moss, Algae or Lichen embedded it will gradually flake off but needs time for the root structure to break up. Rinsing too hard may cause more damage to the shingle.

Full Roof Cleanings are backed by our 3 Year Warranty.

MAINTENANCE TIPS

Stubborn Areas

All Homes have those shaded or covered areas that are prone to moisture & growth. We suggest pruning trees & shrubs to allow space between home for air & sunlight to prevent growth.

Lights & Bugs

We understand the desire for security and decorative lighting however, at night those lights attract insects, spiders & cobwebs that can quickly escalate the area to become dirty before the rest of the home. We do offer touch up services if needed

DIY & Maintenance

While Soft Wash is safer & lasts much longer than conventional pressure washing as mentioned above there might be spots that return before a full clean is needed.

We do offer touch up services, but should you decide to attempt a DIY cleaning we recommend:

30 Second Cleaner

Available @ Home Depot.

Not as powerful as Soft Wash

it can handle minor algae while

remaining safe if used as directed.
